

# Vélonautic

## Datasheet

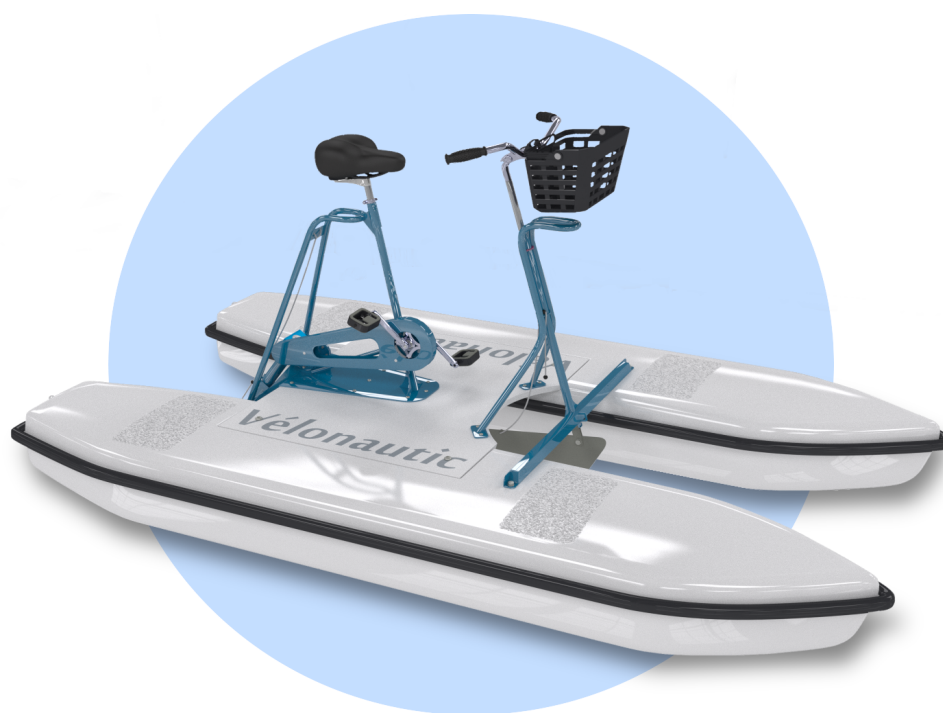

### An elegant design for a high quality product

The Velonautic is built with high quality materials. The steel frame bent/welded gives a very good rigidity to the assembly. Automatic disengagement of the Elphéon's shaft allows the propeller to rise in contact with the bottom.

Sealed transmission block and chainless propulsion of Velonautic ensure it does not pollute during use.

The Velonautic is very handy and requires no learning. It can be operated from six years.

The Velonautic is guaranteed for two years for the mechanical parts.

### Technical data

- length : 2,50 m
- width : 1,55 m
- total weight : 65 kg
- minimum navigation depth : 50 cm
- floats multilayer resin
- stainless steel screws
- sealed transmission block
- Elphéon's high performance stainless propeller
- two-year warranty parts and labor
- Pedal boat classified as Category D
